List of Figures

List of Tables

1 Introduction

- 1.1 Motivation
- 1.2 Intra-operative thermal neuroimaging
- 1.3 Thermal Imaging Applications and Summary

2 Related Work

- 2.1 Summary

3 Semi-parametric regression

- 3.1 Proposed Model
 - 3.1.1 Parametric component
 - 3.1.2 Non-parametric components as B-Splines
 - 3.1.3 Penalized B-Splines
- 3.2 Optimal smoothing using Akaike Information criterion

4 Feature reduction and Discretization of spline coefficients

- 4.1 Principal component analysis
 - 4.1.1 Mathematical framework
 - 4.1.2 Number of features?
- 4.2 Why discretization?
 - 4.2.1 K-means clustering
 - 4.2.2 Gaussian Mixture Model
 - 4.2.2.1 Expectation Maximization Algorithm
 - 4.2.3 K-Means vs Gaussian Mixture Model
 - 4.2.4 Optimum number of clusters
- 4.3 Summary

5 Spatial Regularization using Markov Random fields

- 5.1 Basic definitions
- 5.2 Neighborhood system and Cliques
- 5.3 Markov random fields and Markov property
- 5.4 Discrete Graphical model as Factor Graphs
- 5.5 Defining Unary and Pairwise Factors
- 5.6 Summary

6 Inference algorithms and OpenGM framework

- 6.1 MAP problem
- 6.2 Sequential tree reweighted message passing (TRWS)
 - 6.2.1 Performance comparison vs Belief Propagation
- 6.3 OpenGM Framework
- 6.4 Functions and Features in OpenGM
- 6.5 Defining factor graphs using OpenGM

- 6.6 Inference and stopping condition
 - 6.6.1 Runtime and Number of Iterations
 - 6.6.2 Energy minimization and bound
- 6.7 Summary

7 Performance Evaluation

- 7.1 Fast Fourier Transform Analysis
 - 7.1.1 Number of Knots vs Sum of Squares
 - 7.1.2 Existing Model vs Proposed Model
- 7.2 TPR, FPR and Accuracy
 - 7.2.1 Boxcar activity pattern
 - 7.2.1.1 Number of Knots
 - 7.2.1.2 Existing Model vs Proposed Model
 - 7.2.2 Gaussian Activity Pattern
 - 7.2.2.1 Number of Knots
 - 7.2.2.2 Existing Model vs Proposed Model

8 Discussions and Conclusions

9 Bibliography
